1. Calculated based on quarterly returns. Upside capture measures a Fund's performance in up markets relative to the benchmark. Downside capture measures a Fund's performance in down markets relative to the benchmark. A down market is defined as those periods in which the market return is less than 0.

Performance information is for Class A Shares without the effect of sales charges and assumes all distributions have been reinvested and if sales charge was included values would be lower.

The performance data quoted herein represents past performance and does not guarantee future results. Market volatility can dramatically impact the fund's short-term performance. Current performance may be lower or higher than figures shown. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Past performance data through the most recent month end is available at feim.com or by calling 800.334.2143. If sales charge was included returns would be lower.

There are risks associated with investing in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. These risks may be more pronounced with respect to investments in emerging markets.

Investment in gold and gold related investments present certain risks and returns on gold related investments have traditionally been more volatile than investments in broader equity or debt markets.

The principal risk of investing in value stocks is that the price of the security may not approach its anticipated value or may decline in value.

The MSCI EAFE Index is an unmanaged total return index, reported in U.S. dollars, based on share prices and reinvested net dividends of approximately 1,100 companies from 21 developed market countries. One cannot invest directly in an index.
