The performance data quoted herein represents past performance and does not guarantee future results. Market volatility can dramatically impact the fund’s short-term performance. Current performance may be lower or higher than figures shown. The investment return and principal value will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Past performance data through the most recent month end is available at www.feim.com or by calling 800.334.2143. Performance information is for Class A Shares without the effect of sales charges and assumes all distributions have been reinvested, and if sales charge was included, value would be lower.

First Eagle Overseas Fund
Focused on Protecting Your Capital Over the Long Term

The performance data quoted herein represents past performance and does not guarantee future results. Market volatility can dramatically impact the fund’s short term performance. Current performance may be lower or higher than figures shown. The investment return and principal value will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Past performance data through the most recent month end is available at www.feim.com or by calling 800.334.2143. The average annual returns for Class A Shares “with sales charge” of First Eagle Overseas Fund give effect to the deduction of the maximum sales charge of 5.00%.

* The annual expense ratio is based on expenses incurred by the fund, as stated in the most recent prospectus.

There are risks associated with investing in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. These risks may be more pronounced with respect to investments in emerging markets.

Investment in gold and gold related investments present certain risks, and returns on gold related investments have traditionally been more volatile than investments in broader equity or debt markets.

The principal risk of investing in value stocks is that the price of the security may not approach its anticipated value or may decline in price.

Standard Deviation is a statistical measure of how returns over time have varied from the mean. A lower number signifies lower volatility.

R-Squared reflects the percentage of a fund’s movements that is explained by movements in its benchmark index, showing the degree of correlation between the fund and the benchmark.

Beta is a measure of the fund’s volatility (risk) relative to the overall market. The higher the fund’s Beta, the more the fund price is expected to change in response to a given change in the value of the market.

Alpha is a measure of the fund’s excess return relative to the return of the benchmark index.

Information Ratio evaluates the ratio of the fund’s returns above those of a benchmark against the volatility of those returns.

The MSCI EAFE Index is an unmanaged total return index, reported in U.S. dollars, based on share prices and reinvested net dividends of approximately 1,100 companies from 21 developed market countries. One cannot invest directly in an index.

Investors should consider investment objectives, risks, charges and expenses carefully before investing. The prospectus and summary prospectus contain this and other information about the Funds and may be obtained by asking your financial adviser, visiting our website at www.feim.com or calling us at 800.334.2143. Please read our prospectus carefully before investing. Investments are not FDIC insured or bank guaranteed, and may lose value.
